

SUSTAINABILITY STATEMENT

WHY WE BELIEVE SUSTAINABLE DEVELOPMENT MATTERS?

We believe sustainable development is a strategic opportunity that is integral to the growth of our business. We believe:

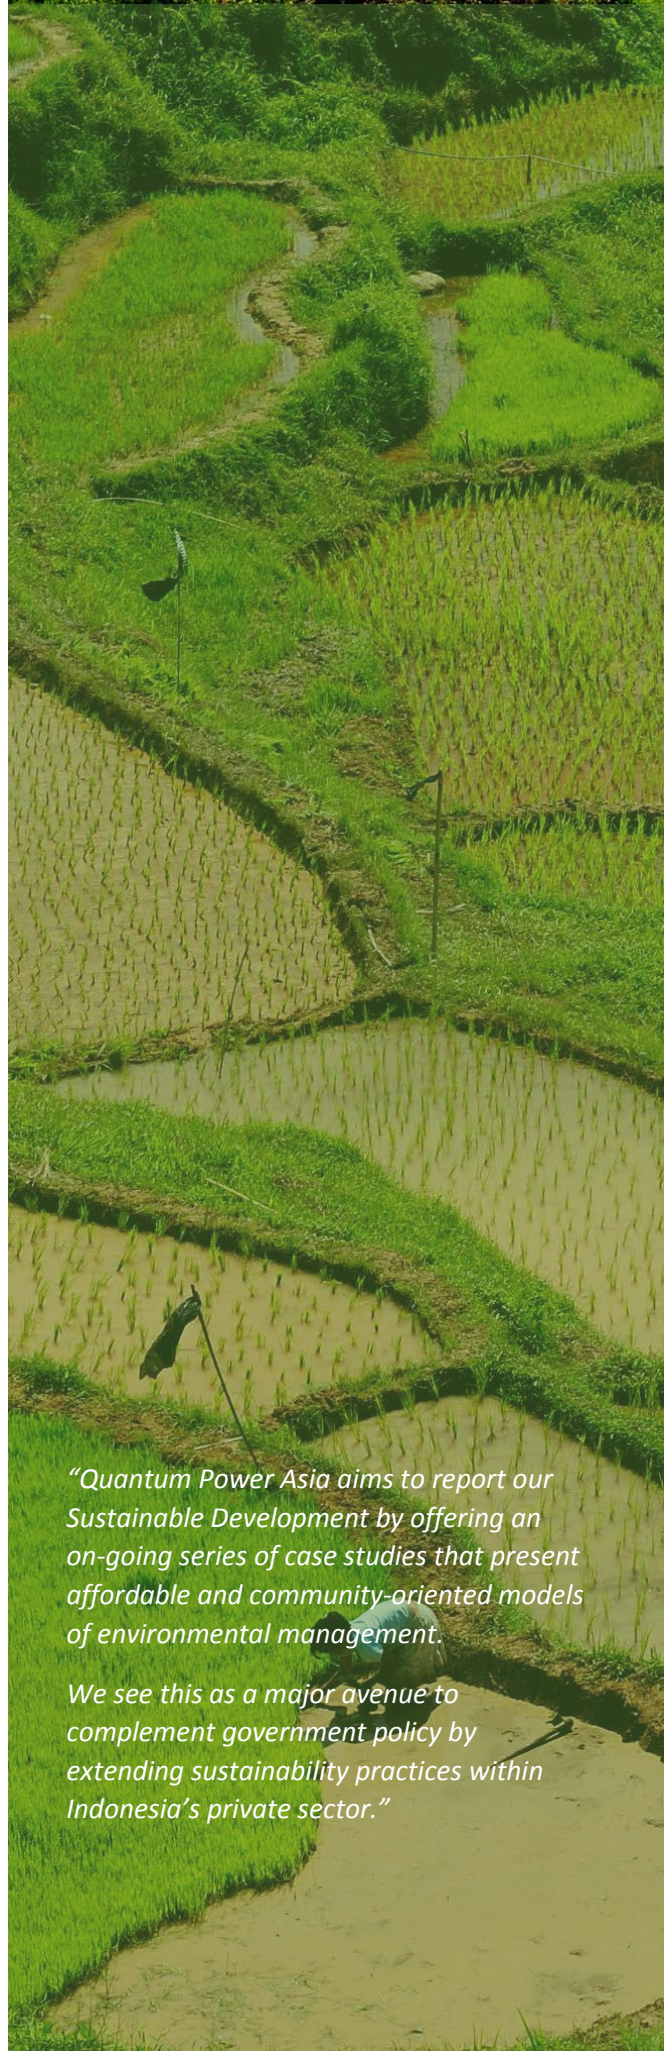

- There is a direct correlation between being responsible to society and the environment, and growing our profitability.
- Pursuing sustainable development makes good business sense and strengthens our commitment to business excellence.
- Our competitiveness will be enhanced by our commitment to meet international, social and environmental performance standards.
- Our positive socio-economic and environmental impact will continue to increase exponentially as we grow our business and develop more projects.
- Our clean energy projects will help Asia accelerate its aspirations to a greener future.

OUR VISION FOR A SUSTAINABLE FUTURE

As a clean energy project developer, Quantum Power Asia aims to lead the development of a more sustainable future in which everyone has access to clean and reliable electricity. We will improve the health and welfare of our communities and the quality of their environment whilst our business continues to grow and prosper.

"Quantum Power Asia aims to report our Sustainable Development by offering an on-going series of case studies that present affordable and community-oriented models of environmental management.

We see this as a major avenue to complement government policy by extending sustainability practices within Indonesia's private sector."

OUR SUSTAINABLE DEVELOPMENT STRATEGY

- Integrate sustainability into business planning and decision making processes
- Consider sustainability as a key criteria when choosing our external partners and advisors
- Develop clean energy power plants that reduce emissions
- Design and implement our projects in collaboration with the local community
- Support social entrepreneurs and companies
- Implement healthcare improvement programs
- Implement Educational programs
- Engage with our suppliers to ensure their practices are in line with our sustainability goals
- Help them to improve health, safety and environmental standards
- Assist them to improve energy efficiency and reduce their ecological footprint

IMPLEMENTING OUR VISION

We will realise our vision by implementing the following go-forward strategy:

- Embed sustainable development principles into our corporate culture and our decision-making processes;
- Create a sustainability unit which provides independent and sophisticated recommendations and implementation guidance on various issues relating to sustainable development, such as environmental protection, community development and codes of business conduct;
- Establish a specific role in our organisational structure to drive our sustainable development objectives;
- Develop tools and strategies to plan, execute and evaluate sustainable development strategies across our portfolio of projects;
- Build a sustainable development knowledge centre that shares basic concepts, principles, and practical case studies for our employees to raise their awareness of sustainability issues. This knowledge will support their ability to implement sustainability in their business activities;
- Support research of new and innovative technologies that could help to maximise our project's sustainable impact and minimize our ecological footprint, while also creating cost reductions and savings;
- Provide a healthy, motivating and diverse workplace for our employees;
- Encourage our teams to reduce energy, natural resources and material consumption across our offices and workplaces;
- Work with our internal and external stakeholders to develop an evaluation criteria and standards to assess and report on our sustainable development performance; and
- Communicate regularly with our stakeholders to enhance awareness of, and pride in our sustainability achievements.
